

SecureProfit Hub

User Guide

Complete walkthrough for end users

Generated April 19, 2026

A complete walkthrough of every feature in the SecureProfit Hub web application for the non-technical end user. SecureProfit Hub is a project, time and profitability management system designed for an Indonesian IT security consulting firm.

1. Getting Started

1.1 Logging In

1. Open the application URL in your browser. 2. Enter your email and password and click **Initialize Session**. 3. On first login the test environment shows a "Test Credentials" panel for each role — these can be used for demo or training purposes.

If you enter the wrong password 5 times within 15 minutes, the login form is locked for that email/IP combination for 15 minutes (brute force protection).

1.2 Roles and What You Can See

The sidebar adapts to your role. The roles are:

Role	Typical user	Main responsibilities
MANAGEMENT (PMO Director)	Senior management	Full visibility, BI, audit logs, all approvals
PROJECT_MANAGER	PM	Approve timesheets, manage their projects, capacity planning
SALES	Account exec	Register new opportunities, track contract value
KONSULTAN	Consultant / Pentester	Submit timesheets against assigned projects
TECHNICAL_WRITER	Report writer	Submit timesheets, write deliverables
ADMIN_PROJECT	Project administrator	Upload BAST/Invoices, manage clients

1.3 The Sidebar

- **Dashboard** — your role-specific home page
- **Projects** — list and detail of all projects
- **Time Tracking** — your personal timesheet entries
- **Approval Inbox** (*PM/Management*) — pending timesheets to approve
- **Resources** (*PM/Management*) — utilization of every consultant
- **Capacity Planning** (*PM/Management*) — upcoming workload calendar
- **Clients** (*Management/Admin*) — client master data
- **Users** (*Management*) — user master data
- **Business Intelligence** (*Management*) — executive analytics
- **Audit Log** (*Management*) — full change history
- **Settings** — your profile and preferences

The user avatar at the bottom-left shows your name and role and includes the **Logout** button.

2. Dashboards

The dashboard automatically adjusts to your role.

2.1 Management Dashboard

Shows the entire firm at a glance:

- KPI tiles: total projects, active projects, total contract value, total actual cost, total actual profit, average margin, pending timesheets, and total mandays delivered.
- **Profit Trend** chart (revenue vs cost vs profit over time).
- **Status Breakdown** (Observation / Active / Pause / Complete / Closed).
- **Top Projects** by contract value.
- **Project Type** quick stats.
- **Pending Approval Aging** — shows how old the oldest unapproved timesheet is, with 24h / 48h / 72h+ buckets.
- **Utilization Trend** — daily utilization for the past 30 days.
- **Resource Utilization Detail** — per person status (Active / Idle / Overloaded), assignment end dates, and people finishing soon.
- **Recent Activity** — the latest events from across the system.

2.2 Project Manager Dashboard

A focused subset of the Management dashboard, restricted to projects where the user is the assigned PM.

2.3 Other Roles

Sales / Konsultan / Writer / Admin land on a personal dashboard that shows their open work and recent activity.

3. Projects

3.1 Project List

The Projects page lists every project with: code (SPK/PO), name, client, status badge, contract value, profit, and margin. You can filter by status and search by name or code.

3.2 Creating a Project

Click **+ New Project** (Sales or Management).

Fill in:

- SPK/PO code (must be unique)
- Name and description
- Client (select from the client master)
- Sales and PM owners

- Start and end dates
- Contract value (IDR), estimated cost, planned mandays

The project starts in **OBSERVATION** status.

3.3 The 5-Status Lifecycle

Status	Meaning	How to reach it
OBSERVATION	Pre sales / opportunity	Default on creation
ACTIVE	Work in progress	Manual change
PAUSE	Temporarily on hold	Manual — **requires a written reason**
COMPLETE	Delivery done, awaiting closure	Manual — **requires a written reason**
CLOSED	Fully closed (no further changes)	**Automatic** when both BAST and Invoice are uploaded

The "Last status change reason" is shown as a yellow banner on the project detail page so everyone can see why a project was paused or completed.

3.4 Project Detail

The project detail page contains several panels:

- **Header** — name, code, status badge, status changer.
- **Financial summary** — contract value, estimated cost, actual cost, actual profit, margin %, planned vs actual mandays.
- **Timeline / Gantt** view of the project window.
- **Resources** — consultants assigned, with planned mandays and daily rate. PM/Management can add or remove resources here.
- **Timesheets** — all approved/submitted hours for this project.
- **Documents** — upload area for BAST, Invoice, Contract, Other. When both a BAST and an Invoice are uploaded the project auto-closes.
- **Activity** — chronological project events.

3.5 Excel Export

Use the **Export** button on the project list to download an Excel file of the filtered project list with all financial KPIs. Other lists (timesheets, resource utilization) also offer Excel export where applicable.

4. Time Tracking

4.1 Submitting Timesheets

1. Open **Time Tracking**. 2. Click **New Entry**. 3. Pick the project, date, hours (must be > 0 and "d 24), and optional description (max 1000 characters). 4. Save as **DRAFT** to keep editing, or **Submit** to send to your PM.

A submitted timesheet cannot be edited until your PM rejects it back to draft.

4.2 Approval Inbox (PM / Management)

The **Approval Inbox** shows every timesheet currently in **SUBMITTED** state for projects you own (or all projects, for Management).

For each entry you can:

- **Approve** — the hours are now counted toward project cost and the consultant's utilization.
- **Reject** with a reason — the timesheet returns to the consultant as **REJECTED** with your note attached.

The dashboard "Pending Approval Aging" widget highlights entries older than 48 hours so nothing slips through.

5. Resources & Capacity

5.1 Resources Page

Lists every active consultant, technical writer, and PM with:

- current project and client (if assigned)
- days remaining in the current assignment
- days since last approved timesheet
- utilization % for the current month
- visual status: **Active**, **Idle**, **Overloaded**, **Finishing Soon**, **Idle Long**

5.2 Capacity Planning (PM / Management)

A calendar grid of upcoming weeks shows planned mandays vs available capacity per person, so you can see at a glance who is over- or under-booked.

6. Clients & Users

6.1 Clients

Management and Admin Project can create and edit client records (name, contact person, email, phone, industry).

6.2 Users

Management can create users, assign roles, set daily rate, and deactivate users. **Deletion is "soft"** — a deleted user is hidden from all lists but their historical timesheets and audit trail are preserved. Deleted users can no longer log in.

When a user is created or modified, an audit-log entry is recorded showing the before/after snapshot (passwords are never stored in the audit log).

7. Business Intelligence (Management only)

Open **Business Intelligence** in the sidebar. The page is a single executive dashboard with global filters at the top:

- **Period** — This Month, This Quarter, This Year, or **Custom** date range
- **Principal** — all PMs/Management or one specific principal
- **Project Type** — all or one of: Pentest, VAPT, GRC, SOC, Threat Modeling, Threat Hunting, Fraud Investigation, Forensics, Red Team, Audit, Training, Other.

7.1 Health KPI Strip

Five compact tiles across the top:

- **Margin (Month)** and **Margin (Quarter)** — overall profit margin %
- **Avg Project Duration** — across closed/completed projects
- **Project Success Rate** — % of CLOSED projects with positive profit, plus the absolute counts
- **Util. Trend (3mo avg)** — average utilization over the past 3 months

Green = healthy, red = below target.

7.2 Profitability by Project Type

- Bar chart of revenue and profit per type
- Pie chart of profit distribution
- Top 3 most profitable types (highlighted cards)
- Detail table with revenue, cost, profit, margin per type

7.3 Team Performance by Principal

- Bar chart of revenue and profit per principal
- Ranking table sorted by profit, showing project count, team size, revenue, profit, average margin and average team utilization

7.4 Resource Demand Forecast (Next 3 Months)

A stacked bar chart projecting mandays needed each month, broken down by: Junior, Senior/Consultant, Tech Writer, Admin Project, PM. Below the chart, three monthly cards show whether capacity covers the forecast — a red **Shortage** badge appears when demand exceeds capacity.

7.5 Utilization Trend & Top 5 Most Profitable Projects

Two side-by-side cards: a 3-month utilization line chart and the 5 projects with the largest profit in the selected scope.

8. Audit Log (Management only)

Open **Audit Log** in the sidebar. Every important change in the system appears here:

- User login and failed login attempts (with the email tried)
- User create / update / delete
- Project create / update / delete / status change
- Timesheet submit / approve / reject
- Document upload
- Resource add / remove

Filters: date range, user, action type, entity type. Click any row to open a **Details** dialog that shows the full **before** and **after** JSON snapshot of what changed. This is the system of record for compliance and incident investigation.

9. Notifications

Important events generate in-app notifications shown via toast messages:

- Timesheet submitted !' notifies the PM
 - Timesheet approved/rejected !' notifies the consultant
 - Document uploaded !' notifies the PM
 - Project status changed !' recorded in activity feed
 - Project auto-closed when BAST + Invoice are present !' recorded in activity feed
-

10. Tips & Best Practices

- Always provide a clear **status change reason** when pausing or completing a project — it appears as a yellow banner and is auditable.
- PMs should clear the Approval Inbox at least once a day to keep the "Pending Aging" widget green.
- Use the BI **Custom** period to compare quarter over quarter or year over year performance for a specific principal.
- Re-check your daily rate in **Users** if your profit numbers look wrong — cost is computed as $(\text{hours} / 8) \times \text{dailyRate}$.
- If you are locked out after too many wrong passwords, wait 15 minutes or contact a Management user to reset.
